Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Ground GNN with Hyperbolic Geometry**

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.

**Hyperbolic Graph Neural Networks**

Graph neural networks can be interpreted as performing message passing between nodes (Gilmer et al., 2017).

**Main Idea:** We extend graph neural networks to operate on Riemannian manifolds with differentiable trainable parameters.
